

**MEMBRANE TECHNOLOGY****Course Code : 315312**

**Programme Name/s : Chemical Engineering**  
**Programme Code : CH**  
**Semester : Fifth**  
**Course Title : MEMBRANE TECHNOLOGY**  
**Course Code : 315312**

**I. RATIONALE**

The Membrane Technology course provides crucial knowledge and skills in membrane separation processes vital for chemical, pharmaceutical, food, dairy, and biotechnology industries. The course explores membrane types, modules, flow patterns, materials, preparation methods, and pore size distribution. Key topics include Microfiltration, Ultrafiltration, Nanofiltration, Reverse Osmosis transport mechanisms, fouling, and operating parameters. Combined theoretical and practical learning makes the student proficient to work on membrane technologies in industry.

**II. INDUSTRY / EMPLOYER EXPECTED OUTCOME**

The aim of this course is to help the students to attain the following industry identified competency through various teaching learning experiences.

**1. Operate membrane based systems in chemical and allied industries.****III. COURSE LEVEL LEARNING OUTCOMES (COS)**

Students will be able to achieve & demonstrate the following COs on completion of course based learning

- CO1 - Identify a Membrane Separation Process for a given industrial application.
- CO2 - Select appropriate membrane and module with suitable flow characteristics for a given separation duty in chemical process industry
- CO3 - Develop and characterize membranes for various applications using different materials.
- CO4 - Analyze transport mechanisms and fouling causes of membrane separation processes and suggest fouling control measures.
- CO5 - Identify appropriate design and operating parameters for a membrane separation process for its effective performance.

**IV. TEACHING-LEARNING & ASSESSMENT SCHEME**

**Total IKS Hrs for Sem. : 0 Hrs**

Abbreviations: CL- ClassRoom Learning , TL- Tutorial Learning, LL-Laboratory Learning, SLH-Self Learning Hours, NLH-Notional Learning Hours, FA - Formative Assessment, SA -Summative assessment, IKS - Indian Knowledge System, SLA - Self Learning Assessment

Legends: @ Internal Assessment, # External Assessment, \*# On Line Examination , @\$ Internal Online Examination

Note :

1. FA-TH represents average of two class tests of 30 marks each conducted during the semester.
2. If candidate is not securing minimum passing marks in FA-PR of any course then the candidate shall be declared as "Detained" in that semester.
3. If candidate is not securing minimum passing marks in SLA of any course then the candidate shall be declared as fail and will have to repeat and resubmit SLA work.
4. Notional Learning hours for the semester are (CL+LL+TL+SL)hrs.\* 10 Weeks
5. 1 credit is equivalent to 30 Notional hrs.
6. \* Self learning hours shall not be reflected in the Time Table.
7. \* Self learning includes micro project / assignment / other activities.

## V. THEORY LEARNING OUTCOMES AND ALIGNED COURSE CONTENT

| Sr.No | Theory Learning Outcomes (TLO's) aligned to CO's.                                                                                                                                                                                                                                 | Learning content mapped with Theory Learning Outcomes (TLO's) and CO's.                                                                                                                                                                                                                                                                                                                                                | Suggested Learning Pedagogies.                                                  |

## **VII. SUGGESTED MICRO PROJECT / ASSIGNMENT/ ACTIVITIES FOR SPECIFIC LEARNING / SKILLS DEVELOPMENT (SELF LEARNING)**

### **Micro project**

- **Case Study on Industrial Applications:**

Identify and present a case study on the use of membrane technology in one of the following industries: chemical, pharmaceutical, food and dairy, or biotechnology. Include the specific process, type of membrane used, and the advantages and challenges encountered.

- **Flow Pattern Simulation**

Simulate different flow patterns (complete mixing, co-current, cross-flow, counter-current) using a software tool. Analyze the effects of each flow pattern on membrane performance.

- **Membrane Preparation Techniques**

Prepare a report on various methods of membrane preparation (phase inversion, sol-gel peptization, film stretching). Include practical steps, materials required, and possible challenges.

- **Fouling Control Measures**

Develop a comprehensive guide on different types of membrane fouling and the respective control measures. Include

preventive maintenance schedules and cleaning protocols.

- **Design and Operating Parameters Optimization**

Conduct a study on the impact of design and operating parameters on the performance of NF and RO processes. Use simulation tools to optimize these parameters for a specific application.

### **Assignment**

- **Membrane Classification and Comparison**

Create a detailed classification chart of different types of membranes (microporous, asymmetric, thin-film composite, electrically charged, inorganic). Compare their properties, advantages, and disadvantages.

- **Material Selection for Membrane Preparation**

Research and choose suitable materials for membrane preparation based on specific separation requirements. Justify your choice based on the material properties and application needs.

- **Factors Influencing MF and UF Processes**

Identify and explain the key factors influencing retention and flow characteristics in MF and UF processes. Provide real-life examples where these factors are critical.

- **Comparative Analysis of Membrane Processes**

Compare NF and RO with MF and UF in terms of pore size, separation capabilities, and typical applications. Create a comparative table for easy reference.

### **Activity**

- **Real-Life Industrial Application**

As a group, select an industrial process that uses membrane technology. Visit the site (if possible) or research extensively to prepare a detailed report on the application, challenges, and solutions.

- **Analysis of Different Membranes**

Conduct a series of experiments to compare the performance of different types of membranes (e.g., MF, UF, NF, RO) under similar conditions. Analyze and present the data, highlighting the strengths and weaknesses of each membrane type.

- **Workshop: Membrane Cleaning Techniques**

Organize a workshop on various membrane cleaning techniques. Each group will prepare and demonstrate a cleaning method (e.g., chemical cleaning, backwashing, enzymatic cleaning) and discuss its effectiveness and impact on membrane lifespan.

- **Field Visit: Industrial Membrane Plant Tour**

Organize a field visit to an industrial plant using membrane technology. Observe the operations, interact with professionals, and gather information on the practical challenges and solutions. Prepare a report and presentation on your observations and insights.

#### **Note :**

- Above is just a suggestive list of microprojects and assignments; faculty must prepare their own bank of microprojects, assignments, and activities in a similar way.
- The faculty must allocate judicious mix of tasks, considering the weaknesses and / strengths of the student in acquiring the desired skills.
- If a microproject is assigned, it is expected to be completed as a group activity.
- SLA marks shall be awarded as per the continuous assessment record.
- For courses with no SLA component the list of suggestive microprojects / assignments/ activities are optional, faculty may encourage students to perform these tasks for enhanced learning experiences.
- If the course does not have associated SLA component, above suggestive listings is applicable to Tutorials and maybe considered for FA-PR evaluations.

## VIII. LABORATORY EQUIPMENT / INSTRUMENTS / TOOLS / SOFTWARE REQUIRED

| Sr.No | Equipment Name with Broad Specifications                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Relevant LLO Number |

**X. ASSESSMENT METHODOLOGIES/TOOLS****Formative assessment (Assessment for Learning)**

- Theory:** Comprises of two progressive theory tests to be assessed out of **30 Marks Maximum** wherein, the average of the marks obtained in both the tests is to be considered for final gradation.
- Laboratory Learning:** Comprises of a continuous assessment of each Experiment to be assessed out of **25 Marks Maximum** wherein 60% marks are to awarded for Process related performance and 40% marks to be awarded for Product related part of the experiment.

**Summative Assessment (Assessment of Learning)**

- Theory:** Comprises of End Semester Examination to be assessed out of 70 Marks Maximum.
- Laboratory Learning:** Comprises of an End Semester Examination to be assessed out of 25 Marks Maximum.

| 1            | COMSOL Multiphysics                                         | This software is highly versatile and is used for simulating various physical processes, including those in membrane technology. It can model the flow patterns, pressure distributions, and solute concentrations in membrane systems.                                                                                                                                                                                                                                                             |
| 2            | Aspen Plus                                                  | Aspen Plus is a process simulation software used in chemical engineering. It can model and optimize membrane separation processes, including reverse osmosis, ultrafiltration, and nanofiltration.                                                                                                                                                                                                                                                                                                  |
| 3            | MATLAB                                                      | MATLAB is a powerful tool for numerical analysis and simulation. It can be used to model membrane processes, develop control algorithms, and analyze experimental data.                                                                                                                                                                                                                                                                                                                             |
| 4            | CHEMCAD                                                     | CHEMCAD is another process simulation software that can be used to model membrane separation processes, including the design and analysis of membrane systems.                                                                                                                                                                                                                                                                                                                                      |
| 5            | NPTEL (National Programme on Technology Enhanced Learning.) | NPTEL offers free online courses and video lectures in engineering and science, including topics on membrane technology.<br><b>URL:</b> <a href="https://onlinecourses.nptel.ac.in/noc22_ch14/preview">https://onlinecourses.nptel.ac.in/noc22_ch14/preview</a><br><b>URL:</b> <a href="https://nptel.ac.in/courses/103/106/103106139/">https://nptel.ac.in/courses/103/106/103106139/</a><br><b>URL:</b> <a href="https://www.youtube.com/user/nptelhrd">https://www.youtube.com/user/nptelhrd</a> |
| 6            | MIT OpenCourseWare (Massachusetts Institute of Technology)  | MIT OCW provides free course materials from a wide range of subjects, including chemical engineering and membrane technology.                                                                                                                                                                                                                                                                                                                                                                       |
| 7            | Coursera                                                    | Coursera offers free courses from universities and institutions around the world. Look for courses on membrane technology, chemical engineering, and related subjects. (Note: Some courses may have free content with an option to pay for a certificate.)                                                                                                                                                                                                                                          |
| 8            | ScienceDirect (Open Access Articles)                        | ScienceDirect provides access to open access articles from the Journal of Membrane Science.                                                                                                                                                                                                                                                                                                                                                                                                         |
| 9            | YouTube                                                     | YouTube hosts many educational channels and lectures on membrane technology. Channels like MIT OpenCourse Ware, NPTEL, and others provide valuable content.<br><b>URL:</b> <a href="https://www.youtube.com/results?search_query=membrane+technology+education">https://www.youtube.com/results?search_query=membrane+technology+education</a>                                                                                                                                                      |

## MEMBRANE TECHNOLOGY
